Supermarket Sales Report

Problem Statement:

Retail businesses need to track sales performance, revenue trends, and product line contributions to optimize inventory and marketing strategies. This dashboard provides insights into sales by category, customer type, and performance over time.

Technologies Used:

- .**SQL**: Data extraction, transformation, and loading (ETL)
- .**Power BI**: Data visualization and dashboard creation

Key Insights:

- .**Total Sales & Revenue Trends**: The business achieved total sales of **\$322.97K**, with a **5% average gross margin**.
- .**Product Line Performance**: "Food and Beverages" generated the highest revenue (\$56.14K), followed by "Sports and Travel" (\$55.12K).
- .**Customer Type Contribution**: Members contributed significantly more to total revenue than normal customers.
- .**Monthly Sales Volume**: A fluctuation in sales was observed, with a slight dip in February.

Recommendations:

- 1.**Enhance Member Engagement** – Since members contribute a significant portion of total sales, consider implementing loyalty programs and personalized promotions to increase their retention and spending.
- 1.**Optimize Product Line Performance** – Focus on high-performing product categories (e.g., Food & Beverages) while improving sales strategies for lower-performing ones.
- 1.**Adjust Stock Based on Trends** – Monitor monthly sales volume fluctuations and adjust stock levels accordingly to avoid overstocking or shortages.
